

Flexible Floating Bridges and Walkways

Tech Offer ID: CAS0013 | Published: 18/10/2017

Helpdesk: Mangena Mhlabunzima | Phone: 0431010190 | Email: mangena@connectandsolve.co.za

Partner Personal Information

Title of the Project/Product:	Flexible Floating Bridges and Walkways
Technology Maturity:	Prototype
Contact person:	Tex Neveling
Email:	tex@surego.co.za
Organization Name:	Neveling Engineering Consultants
Web Address:	www.surego.co.za
Organization Type:	Startup-Private Company
Web Address:	None
Province:	Eastern Cape
Town:	East London
Type of Industry:	Engineering
Technical Area:	Disaster Management & Material Handling Engineering
Intellectual Property:	Yes, No. 2010/00809
Desired Relationship:	Customers, Funding or Investor

Brief Summary:

The Sure GO! is a full SA Patent Technology that offers flexible bridges that will flow and float in changing currents and water levels that can be used as a temporary and permanent installation.

Technology Offer Detailed Description:

The SureGO! Solution can be a walkway and driveway which ensures uninterrupted flooring with the protection of hand railing in any position while changing direction. This solution offers a bridge that rides on water constantly adapting to the changing water levels and currents and is ideal for flood situations, other emergency services and mining or industrial applications. In mining and industrial walkways traditional designs are forced to open gaps in the walkway floors and hand railings at the direction change points. This causes injuries when workers step into these openings requiring them to wear floating safety jackets and to make 3 point contact all the times resulting in unnecessary downtime and loss of productivity.

Team and Related Experience:

Tex Neveling: Tex is a qualified maintenance fitter design draughtsman and an Engineer. He studied Management Development Program - Project Management at UNISA School of Business in 1990 and has been operating Neveling Engineering Consultants since 2012.
